

Employment Trends in the NSW Public Sector

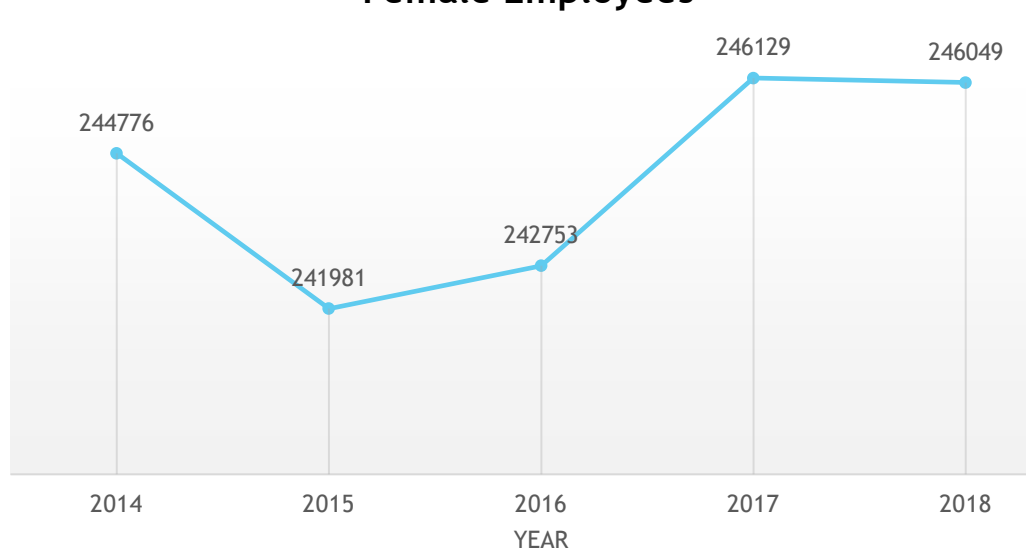

Trends in male and female employment

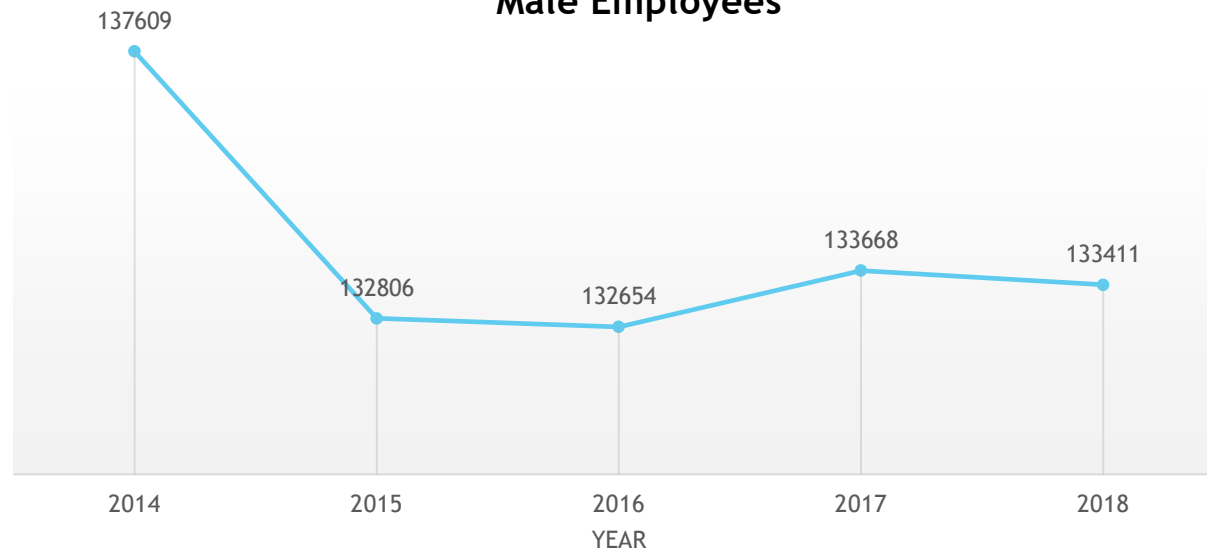

From 2014 to 2015 there was a decline in total employees. However, from 2015 to 2017 there was an increase again with it levelling off from 2017 to 2018.

Trends in Part Time Employment and Future Projections

Part time employment has been increasing over the past 5 years.

This could be due to changes in the labour market and the effects of the pandemic.

Future Projections

The graphs suggest a trend upwards in part time roles for the sector. This could mean that part time employment will further increase by 2025.

This also holds true for both genders that there is an increase in proportion of part time work in relation to their full-time counterparts.

Certain clusters of the sector have large gender ratio imbalances such as education and transport. It is important that these are addressed so that there is a more equitable and diverse workplace.
